- 1. A method for the production of zinc acrylate, which comprises dispersing zinc oxide in any of (a) an aliphatic hydrocarbon solvent, (b) a mixed solvent formed between an aliphatic hydrocarbon solvent and an aromatic hydrocarbon solvent, and (c) a mixed solvent formed between an aromatic hydrocarbon solvent and an alcohol and causing acrylic acid to react with said zinc oxide in said solvent.
- 2. A method according to claim 1, wherein the reaction of said zinc oxide with acrylic acid in said solvent is performed in the presence of a higher fatty acid of 12 - 30 carbon atoms.
 - 3. A method according to claim 1, wherein said aliphatic hydrocarbon solvents is an alkane having 6 10 carbon atoms, said alcohol is an alcohol having 1 8 carbon atoms, and said aromatic hydrocarbon solvent is toluene or xylene.
 - 4. Zinc acrylate forming the crystals thereof having a long axis of not less than $5\mu m$ and an aspect ratio in the range of 1 30.
 - 5. Zinc acrylate according to claim 4, further having a 50% particle diameter of not less than 6µm.
 - 6. Zinc acrylate according to claim 4, wherein the ratio of passage of the crystals thereof through a sieve opening of 1 mm is not less than 90%.
- 7. Zinc acrylate according to claim 4, wherein the solid disintegrating load of the crystals thereof is not more than 1.0 kg/cm².
 - 8. Zinc acrylate according to claim 4, wherein the crystals thereof have a degree of compaction of not more than 50%.
 - 9. A zinc acrylate composition, comprising the zinc acrylate set forth in any of claims 4 8 and a zinc salt

of a higher aliphatic acid of 12 - 30 carbon atoms.
